2028_REC_OOPS using Java_Week 8_Q1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotExceptionAtTheRateExceptionDomainException

A typical email address should have a " . " character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

Input Format

The first line of input contains the email to be validated.

Output Format

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

Sample Test Case

Input: sample@gmail.com

Output: Valid email address

Answer

```
// You are using Java
import java.util.*;

class DotException extends Exception {
    public DotException(String msg) {
        super(msg);
    }
}

class AtTheRateException extends Exception {
    public AtTheRateException(String msg) {
        super(msg);
    }
}

class DomainException extends Exception {
    public DomainException(String msg) {
        super(msg);
    }
}

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        String email = sc.nextLine();

        try {
            // Rule 1: Check '@'
            if (!email.contains("@") || email.startsWith("@") || email.endsWith("@") ||
email.indexOf("@") != email.lastIndexOf("@")) {
                throw new AtTheRateException("Invalid @ usage");
            }
```

```
        // Rule 2: Check '.'
        if (!email.contains(".") || email.endsWith(".") || email.contains("..") ||
email.indexOf(".", email.indexOf("@")) == -1) {
            throw new DotException("Invalid Dot usage");
        }

        // Rule 3: Check domain
        String domain = email.substring(email.lastIndexOf(".") + 1);
        if (!(domain.equals("in") || domain.equals("com") || domain.equals("net") ||
domain.equals("biz"))) {
            throw new DomainException("Invalid Domain");
        }

        // If all correct
        System.out.println("Valid email address");

    } catch (AtTheRateException | DotException | DomainException e) {
        System.out.println(e.getClass().getSimpleName() + ": " + e.getMessage());
        System.out.println("Invalid email address");
    }
  }
}
```

Status : Correct **Marks : 10/10**
